NOTES TO USERS

This map is for use in administering the National Flood Insurance Program, it does not necessarily identify all areas subject to flooding, particularly from local drainage sources of small size. The community map repository should be consulted for possible updated or additional flood hazard information.

To obtain more detailed information in areas where Base Flood Elevations (BFEs) and/or floodways have been determined, users are encouraged to consult the Flood Profiles and Floodway Data and/or Summary of Stillwest Elevations tables contained within the Flood Insurance Study (FIS) report that accompanies this FIRM. Users should be aware that BFEs shown on the FIRM represent rounded whole-foot elevations. These BFEs are intended for flood insurance rating purposes only and should not be used as the sole source of flood elevation information. Accordingly, flood elevation data presented in the FIS report should be utilized in conjunction with the FIRM for purposes of construction and/or floodplain management.

Coastal Base Flood Elevations shown on this map apply only landward of 0.0' North American Vertical Datum of 1988 (NAVD 88). Users of this FIRM should be aware that coastal flood elevations are also provided in the Summary of Stillwater Elevations table in the Flood Insurance Study report for this jurisdiction. Elevations shown in the Summary of Stillwater Elevations table should be used for construction and/or floodplain manary of Stillwater Elevations table should be used for construction and/or floodplain management purposes when they are higher than the elevations shown on this FiRM.

Boundaries of the **floodways** were computed at cross sections and interpolated between cross sections. The floodways were based on hydraulic considerations with regard to requirements of the National Flood Insurance Program. Floodway widths and other pertinent floodway data are provided in the Flood Insurance Study report for this jurisdiction.

Cortain areas not in Special Flood Hazard Areas may be protected by flood control structures. Refer to Section 2.4 "Flood Protection Measuries" of the Flood Insurance Study report for information on flood control structures for

The projection used in the preparation of this map was Ohio State Plane North zone 4976 (FIPSZONE 3401). The horizontal datum was NAD83. Olifferences in datum, spheroid, projection or state plane zones used in the production of FIRMs for adjacent jurisdictions may result in slight positional differences in map features across jurisdiction boundaries. These differences do not affect the accuracy of this FIRM.

Plood elevations on this map are referenced to the North American Vertical Datum of 1988. These flood elevations must be compared to structure and ground elevations referenced to the same vertical datum. For information regarding conversion between the National Geodetic Vertical Datum of 1992 and the North American Vertical Datum of 1988, visit the National Geodetic Survey website at http://www.ngs.noaa.gov/ or contact the National Geodetic Survey website at http://www.ngs.noaa.gov/ or contact the National Geodetic Survey at the following address:

NGS Information Services NOAA, N/NGS12

NOAA. N/NGS12 National Geodetic Survey SSMC-3, #9202 1315 East-West Highway Silver Spring, Maryland 20910-3282 (301) 713-3242

To obtain current elevation description, and/or location information for bench marks shown on this map, please contact the information Services Branch of the National Geodetic Survey at (301) 713-3242, or visit its website at http://www.ngs.noas.gov/.

Base Map information shown on this FIRM was derived from the Lucas County Auditor's Office from photography dated 2006 or later.

This map reflects more detailed and up-to-date **stream channel configurations** than those shown on the previous FIRM for this jurisdiction. The floodplains and floodways that were transferred from the previous FIRM may have been adjusted to conform to these new stream channel configurations. As a result, the Flood Profices and Floodway Date tables in the Flood invariance Study report (which contains authoritative hydratic datal) may reflect stream channel distances that differ from what is shown on this map.

Corporate limits shown on this map are based on the best data available at the time of publication. Because changes due to annexations or de-annexations may have occurred after this map was published, map users should contact appropriate community officials to verify current corporate limit locations.

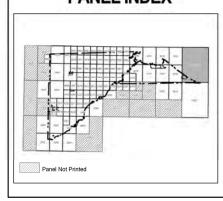

Please refer to the separately printed Map Index for an overview map of the county showing the layout of map panels; community map repository addresses; and a Listing of Community as well as a listing of the panels on which each community as well as a listing of the panels on which each community is located.

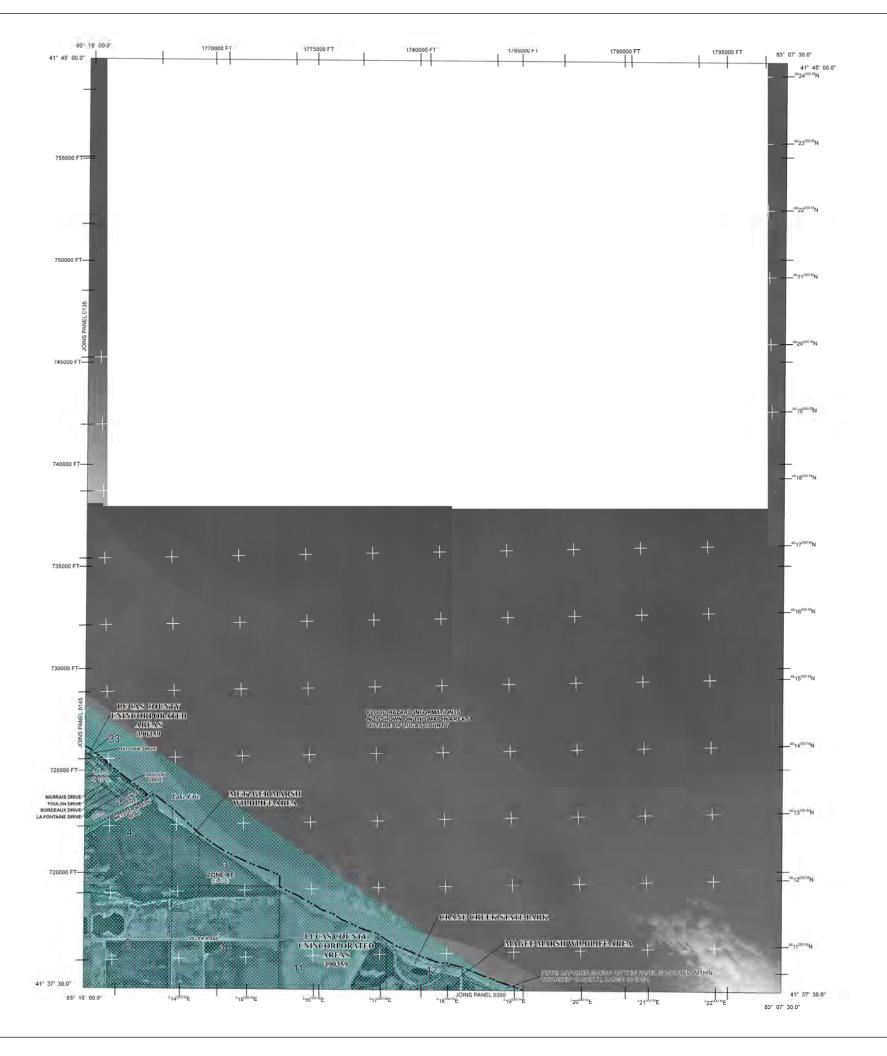

For information on available products associated with this FIRM visit the Map Service Center (MSC) website at http://msc.fema.gov/. Available products may include previously issued Letters of Map Change, a Flood Insurance Study Report and/or digital versions of this map. Many of these products can be ordered or obtained directly from the MSC website.

If you have questions about this map, how to order products, or the National Flood Insurance Program in general, please call the FEMA Map Information eXchange (FMIX) at 1-877-FEMA-MAP or visit the FEMA website at http://www.lema.gov/businessenfip.

The **profile base lines** depicted on this map represent the hydraulic modeling baselines that match the flood profiles in the FIS report. As a result of improved topographic data, the **profile base line**, in some cases, may deviate significantly from the channel centerline or appear outside the SFHA.

PANEL INDEX

LEGEND SPECIAL FLOOD HAZARD AREAS SUBJECT TO INUNDATION BY THE 1% ANNUAL CHANCE FLOOD ual chance flood (100 year flood), also known as the base flood, is the flood fis chance of being equaled or exceeded in any given year. The Special Area is the area subject to flooding by the 1% annual chance flood. Areas of Hazard may include Zones A, AE, AH, AO, AR, ASS, V, and VE. The Base is the water-surface elevation of the 1% annual chance flood. ZONE AE Base Flood Elevations determined. ZONE AH Flood depths of 1 to 3 feet (usually areas of ponding); Base Flood Flood depths of 1 to 3 feet (usually sheet flow on sloping terrain) average depths determined. For areas of alluvial fan flooding, velocities also determined. ZONE AO Area of special flood hazard formerly protected from the 1% annual chance flood event by a flood control system that was subsequently decertified. Zoon A& indicates that the former flood control system is being restored to provide protection from the 1% annual chance or greater flood. ZONE A99 Coastal flood zone with velocity hazard (wave-action); no Base Flood Coastal flood zone with velocity hazard (wave action); Base Flood Elevation FLOODWAY AREAS IN ZONE AE OTHER FLOOD AREAS Areas of 0.2% annual chance flood; areas of 1% annual chance flood with average depths of less than 1 foot or with drainage areas less than 1 square mile; and areas protected by levees from 1% annual chance flood. OTHER AREAS ZONE X Areas determined to be outside of the 0.2% annual chance floodplain. ZONE D Areas in which flood hazards are undetermined, but possible. COASTAL BARRIER RESOURCES SYSTEM (CBRS) AREAS OTHERWISE PROTECTED AREAS (OPAs) CBRS areas and CPAs are normally located within or adjacent to Special Flood Hazard Areas Disamai Swee Ropdow Burgar a.2% arount charte floodplan boundary Floodway boundary CBRS and OFA boundary Sourcery leveling Special Floor Hazard Areas of cities Base Floor Elipsistoms, flood depths or flood relootles. ---- 513----Base Flood Elevation line and value, elevation in feet* Base Flood Elevation value where uniform within zone; elevation in feet* (EL 10) Referenced to the North erican Vertical Datum of 1988 Cross section line Geographic coordinates referenced to the North Ameri Datum of 1983 (NAD 83), Western Hemisphere 85" 03' 45.0", 41" 24' 22.5" 4587000 M 1000-meter Universal Transverse Mercator grid values, zone 1 5000-foot grid ticks: Ohio State Plane North Coordinate Sy 4976 zone (FIPSZONE 3401), Lambert Conformal Conic p 2250000 FT KA0015 x Bench mark (see explanation in Notes to Users section of this FIRM panel) • M1.5 River Mile MAP REPOSITORY Refer to listing of Map Repositories on Map Index Refer to listing of Map Repositories on Map Index EFFECTIVE DATE OF COUNTYMDE FLOOD INSURANCE RATE MAP Closber (3 000) Closber (3 000) EFFECTIVE DATE(B) OF REVISION(B) TO THIS PANEL August 15, 2011 - to update corporate limits, to change Blase Pixed Exerctions and Special Flood Rated Aveas, to incorporate previously issued letters of Map Revision, to reflect updated topographic intormation.
